

INTERNATIONAL SHIP & PORT FACILITY (ISPS) IMPLEMENTATION

The International Ship & Port Facility Security (ISPS) Code came into effect on 1st July 2004 – its primary role is to provide an International framework for the overall Security of Ships or Port Facilities.

Infinite Security Solutions (ISS) has a multitude of services to assist your Company whether it is a single or multiple Port Facilities, a Port Area, or a Vessel. ISS can develop, on a Company's behalf or in conjunction with a Company, the required ISPS documentation and ensure that it is not only implemented but also reviewed and amended as required.

ISS also provides Employee Training with qualified instructors, training DVDs or online solutions all of which can be evaluated with ISS Audits, Inspections or Exercises to ensure your Organisation's Security Management System is in compliance with the ISPS Code.

ISS's Risk & Security Consultants are qualified trainers that can provide generic or specific training, implementation and evaluation training.

Along with the review and amendment of Security Assessments and Plans (development and implementation) of Land or Sea based assets ISS also assesses locations, facilities, installations, processes and procedures to advise Organisations' on aspects that require amending, enhancing, reviewing or rewriting in order to ensure compliance under the ISPS Code.

ISS also offers Audits (internal / external) as well as support during the Recertification process, if required.

ISS Consultancy team has both the technical and practical knowledge to aid Ships and Ports in ensuring that they are compliant under the ISPS regulations. ISS is experienced and able to carry out varying aspects from a security perspective including Risk Assessments, Command & Control, Costing, Strategic & Tactical Solutions, System Integration, Security Management System (SMS), C2 through to C4I Development (Security Assessments, Plans & Procedures), Staffing and Training (Drills & Exercises).

ISS recommends a layered approach from Corporate Security Plans through to individual asset security plans integrated, where possible, with the Safety / Emergency / Contingency Plans. ISS's role (as Risk & Security Consultants) is to develop the security aspect and ensure alignment of all plans to simplify policy and procedures and ensure all plans are supporting and not contradictory.

New Projects (or Asset Command and Control Consolidation)

During the concept, design and fabrication of new Port Facilities, ISS's role (Risk & Security) is to develop the risk table and provide sensible cost effective mitigation solutions for the identified risks and ensure that the designers and equipment suppliers can meet the end users requirements.

INTERNATIONAL SHIP & PORT FACILITY (ISPS) IMPLEMENTATION

All Ships and Ports require a Risk and Security Command and Control location, whether simple or sophisticated, depending on the complexity of the Facility. This is normally designed and operated through the Facility's Operation/Control Room.

As such, the role of our Consultants (Risk & Security) is to bring together all of the various skill sets which are necessary to bring any project to its full potential and fulfil the expectations of the stakeholders. The design and the use of an Operation/Control Room requires two different skill sets. The designers have detailed technical knowledge which can produce the best system currently available. The users, on the other hand, have a deep seated practical knowledge of their own environment and the potential problems they face. Invariably the designers do not possess the practical level knowledge nor do the users have high level technical expertise.

Our Risk Consultants will ensure that the Operation/Control Room is a pivotal tool in providing strategic and tactical solutions to the diverse problems facing a Facility from a safety and security / risk perspective.

ISPS Consultancy involves:

- Initial Risk Assessment
- Command and Control
- Cost
- Understanding the Concept
- System Solution Identification
- System Integration
- Security Management System (SMS)
- C2 Development, including security assessments, plans and procedures
- Staffing
- Training, Drills and Exercises
